

BRAKE S3 MOVED FORWARD/ MOVED BACKWARDS

Clicka on images for larger format

NOW WE CAN OFFER BRAKE S3 IN A "MOVED FORWARD" AND A "MOVED BACKWARDS" VERSION

In some combinations of rear wheel sizes and rear axle settings there is sometimes necessary to mount the brake S3 further on or further back to get a satisfying brake function. [See more info about settings \(pdf\)](#)

When choosing large rear wheels together with a long forward setting of the rear axle the **Brake S3 Moved forward** becomes a suitable choice. Its attachment has a design that enables the brake to be mounted further ahead than Brake S3.

The assembly of **Brake S3 Moved forward** is the same as for the regular Brake S3. [Assembly instruction \(pdf\)](#)

At other combinations of small rear wheels and a short setting of the rear axle, the need is the opposite. The S3 brake has to be mounted further back. To accomplish full brake function we now offer **Brake S3 Moved backwards**, where an **extra brake blade** is mounted on the existing brake. The large brake blade makes the brake reach further back than a brake without the blade.

[See more info about settings \(pdf\)](#)

The assembly of **Brake S3 Moved backwards** is the same as for the PU brake blade. [Assembly instruction \(pdf\)](#)

If you order a wheelchair in a configuration where one of the two alternative brakes above becomes the only option, Panthera will mount them without an extra charge.

Brake S3 Moved forward

Art.no.	Description
4630010	Brake S3 moved forward cpl, pair
4630011	Brake S3 moved forward, left
4630012	Brake S3 moved forward, right

Brake S3 Moved backwards
